

Simple phone utility

- here is a simple script which will look up someone's phone number, we name this script `ring`

```
#!/bin/sh
grep -i $1 $HOME/phones
```

- we assume we have a plain text file in our home directory, called `phones`

```
Fred Bloggs    01234 567890
Joe Smith     34567 890123
```

Ring use

- we can use the script via: `ring joe` and it generates

```
Joe Smith     34567 890123
```
