Tutorial

■ work through the socket examples given in lectures

■ once you have completed and run every client and server program
  ■ do this again, except change the client to connect to your neighbours machine

■ now boot up another PC into another operating system, OSX or Windows
  ■ leave your GNU/Linux machine on!

■ now run the server code on the GNU/Linux PC

■ see if you can make the client run on the Windows or OSX machine and connect to the GNU/Linux machine

Tutorial

- finally if you have time, try and improve the basic web server!
