

Bash and Python tutorial

- write a bash script to list all files in your current directory
- improve your script to write a description of the file type, should include:
 - directory
 - file
- now make your bash script move into a directory and recursively call itself!

Python

- write a python script to list all files in your current directory
- now improve your script to write a description of the file type, should include:
 - directory
 - file
- and make the script descend into directories and print out their contents
