

## Running your own Penguin Tower server

- can be done by opening a terminal and typing the following:

- ```
$ cd  
$ ./opt/bin/ptower-server ./opt/share/ptower/maps/star
```

- to stop the server, type `^C` (press down the control key and then press the `c` key, now release both keys)

- there are a number of maps in the `$HOME/opt/share/penguin-tower/maps` directory

- `m1`, `star` and `glover`
- `star` is the smallest (5 rooms)
